

MX 360

For 1973, we've added oil-damped Thermal-Phase rear shocks; a lightweight Omni-phase Balancer® to smooth out crankshaft vibration; Torque Induction®; improved handling; a redesigned frame for a lower center of gravity; capacitor discharge ignition for a hotter spark and quicker response; and new paint.

This machine was one of the biggest motocross winners in '72. And in '73, will be even bigger.
