

SC 500

In the front of the line, the big new Yamaha 500 Scrambler.

The 500's a heavyweight built to handle like a lightweight, with new Thermal-Phase oil dampening for the rear shocks; automatic compression release for easy starting; Torque Induction for increased torque and quicker response at all speeds.

It's a single, only without the vibration you'd expect.

A light racing version of the unique Yamaha crankshaft counter-balance system, Omni-phase Balancing, makes this the smoothest 500cc two-stroke single ever built.
